Comparison of five gases, 394
Computation for heat capacity and calorific intensity curves, 358
Computation, methods of, for furnaces, 72
Computations for
Continuous Furnaces, 43
for design of open-hearth furnace, 253
Computations for regenerators, 228, 260
for reverberatory furnace, 80
Conclusion, 149
Continuous heating furnace, 43, 138
length of, 56
temperature drop in, 77
Convection, according to Langmuir, 269
currents, velocity of, 187, 188
Converters, Bessemer, 183
Cowper hot-blast stove, 98
Currents of hot gases, subdivision of, 88

Damour, classification of industrial heating by, vii
Darling, heat losses from furnace, walls, 270
Dedication, iv
Defective designs of furnaces, 92
Design assumptions, gas composition, 74
computations for furnaces, 72
computation for open-hearth furnace, 80
computation for reverberatory furnace, 80
of continuous heating furnaces, 43
of open-hearth furnaces, 194
Downdraft brick kiln, 7
Draft conditions in hot-blast stoves, 303
fallacy of metallurgical furnaces, **15**
formulas for chimneys, 184
Drop of flame in open-hearth furnaces, 67

Effect of ascending, horizontal and descending roofs, 51
Experimental apparatus, 3
Experiments, first, 4
second, 7
Experiments to show the analogy between the flow of hot gases and the flow of water, 3

Firebox, function of, 19
First experiment, 4
Flame, character of, 74
drop of, in open-hearth furnaces, 67
Flow of gases in boiler flue, 10
in open-hearth furnace, 37
through an orifice, 27
under thick-crested weirs, 40
Foreword, by Groume-Grjimailo, xv
Friction of gases in brick flues, 168
Frictional resistance in hot-blast stoves, 307
Fuel bed, resistance of, 82
consumption of various furnaces, 186
gases, comparison of, 394
Fundamental viewpoint, 1
Furnaces, considered as inverted weirs, 56
hydrostatic pressure in, 13
methods of computation for, 72
rational construction of, 87

Gas factors, 160, 162
Gas flues, hydrostatic pressure in, 21
Gas mains, hydrostatic pressure in, 24
Gas pipes, hydrostatic pressure in, 15
Gas producer, connection to furnace, 24
with sleeping grate, 22
Gas siphon, Siemens, 22
Gases, flow of, through an orifice, 27
Gases leaving heating chamber, temperature of, 79
Grates, slooping, 22
Groume-Grjimailo, foreword by, xv
Groume-Grjimailo, preface to English Edition by, ix
